What is Bionic and The ecosystem?

Bionic Ecosystem Is A High-Scale Blockchain Network Developed With The Primary Goal Of Expanding The Functionality And Scalability Of The Ethereum Network.

- Scaling Any Existing EVM Blockchain
- No Limitations
- Cross Anywhere

Bionic Layer-2 Solutions To Further Enhance Its Capabilities And Enables Parties To Create Smart Contracts By Utilizing Code To Define The Behavior Of A Virtual Machine (VM) That Executes The Contract's Functionalities.

Bionic network feature

Scaling

Scaling any existing EVM Blockchain.

No restrictions

There is no limit for each block to perform many actions.

Cross anywhere

Cross anywhere with convenience and speed.

The Next Layer 2 Blockchain

Bionic Employs Mechanism Design To Incentivize Off-Chain Consensus Among Parties Regarding The Expected Behavior Of A VM. As A Result, Bionic Miners Only Need To Verify Digital Signatures To Confirm That Parties Have Reached An Agreement On The VM's Behavior. In Cases Where Unanimous Agreement Cannot Be Reached Off-Chain, Bionic Still Allows Honest Parties To Progress The VM State On-Chain.

Our Service to solve problem

Functionality and scalability

Expanding the functionality and scalability of the Ethereum network.

Solves the scalability

Bionic solves the scalability problem with the Optimistic Rollup Security.

Designed to accelerate

Bionic designed to accelerate the network.

Transaction speed

Bionic offers transaction speed that can compete with the existing Layer 2.

Bionic Market cap Projection

Outer circle

And then we have target to 10 Million Marketcap with 10.000+ user a cross the world join to support our project with Release Own Launchpad and CEX listing.

Middle circle

On Several Month we have target to 10 Million Marketcap with 2000+ user join to support our project with Release Decentralize Exchange and Own Official Wallet.

Inner circle

At a Month launch we have target to 1 Million Marketcap with 500 user join to support our project with Release Mainnet and Bridge.

Thanks!
